

Forward des mails vers l'extérieur - Pour tout le tenant (non recommandé).

Configurer au niveau de la BAL utilisateur le forward vers une adresse mail est possible.

Cependant par défaut et pour des raisons de sécurité cette option n'est pas active par défaut dans le tenant.

Connexion à Defender > Email & Collaboration > Policies and rules > Threat Policies > Anti-Spam policies > anti-spam out bound policy

The screenshot shows the Microsoft Defender console interface. On the left, the 'Anti-spam policies' section is visible, featuring a table with columns for 'Name' and 'Status'. Three policies are listed: 'Anti-spam inbound policy (Default)', 'Connection filter policy (Default)', and 'Anti-spam outbound policy (Default)'. The 'Anti-spam outbound policy (Default)' is selected with a blue checkmark, and its status is 'Always on'. On the right, the 'Protection settings' panel is open, showing 'Message limits' with three input fields for external, internal, and daily message limits, all set to '0'. Below these are dropdown menus for 'Restriction placed on users who reach the message limit' (set to 'Restrict the user from sending mail until the following day') and 'Automatic forwarding rules' (set to 'Automatic - System-controlled'). At the bottom of the settings panel are 'Save' and 'Cancel' buttons.

Changer le mode automatic par on - forwarding is enable
